EDUCATION

University of California, Irvine

Irvine, CA

Bachelor of Science in Computer Science

Sep. 2021 – June 2025

- **Relevant Coursework:** Analysis of Algorithms, Database Systems, Distributed Systems, Software Engineering, Operating Systems, Computer Networks, Web Application Development, System Design

EXPERIENCE

Software Engineer Intern

June 2025 – Oct. 2025

Sorenson Communications

Salt Lake City, UT

- Architected an asynchronous serverless REST API in Python using a dual-Lambda fan-out pattern, eliminating a 25-second downstream read timeout and returning HTTP 201 in ~ 503 ms.
- Provisioned AWS infrastructure via Terraform - API Gateway, Lambda, least-privilege IAM - and integrated deployments into GitHub Actions CI/CD pipelines spanning 5 production repositories.
- Containerized integration test harnesses for 5+ end-to-end scenarios with Docker, and shipped a service-health dashboard adopted by operations to replace manual log inspection.

Software Engineer Intern

July 2024 – Oct. 2024

101gen.ai

Bay Area, CA

- Designed a multi-tier data pipeline serving a 36M-article corpus across a hot/warm/cold storage system - Weaviate (vector index), MongoDB (metadata), AWS S3 (full text).
- Engineered a Python batch ingestion pipeline that precomputed embeddings offline to keep query-time work minimal, and exposed ingestion and retrieval workflows through Flask REST endpoints.

AI Engineer Intern

July 2023 – Sep. 2023

AI Ensured

Remote

- Built and deployed an automated medical question-answering system on the MedQuAD dataset (60K+ clinical Q&A pairs), fine-tuning BERT-family models in PyTorch and evaluating precision, recall, and F1.

PROJECTS

JobScout - Multi-Agent AI Platform | Python, Google ADK, Gemini, FastAPI, React

Jan. 2026 – Current

- Architected a multi-agent system on Google ADK and Gemini with agents for job discovery, enrichment, semantic analysis, and generation, coordinated by a stateful orchestrator holding run state.
- Designed a validation and LLM-repair loop that inspects generated output, dispatches targeted repair prompts on failure, and degrades to a review queue - surviving a live Gemini 503 outage.
- Cut end-to-end runtime ~ 3.6 x on warm runs (137s $\rightarrow$ 38s) with an embedding cache and persistent deduplication layer that skips re-embedding and re-scraping of previously seen data.

Full-Stack E-Commerce Platform | Java, JavaScript, MySQL, Docker, Kubernetes, AWS, Nginx

Jan. 2025 – June 2025

- Architected a full-stack Java platform as microservices on Kubernetes with Nginx Ingress routing, sticky sessions, and multi-replica scaling, deployed via multi-stage Docker on AWS EC2.
- Optimized read throughput with MySQL master-slave replication behind Tomcat's JDBC connection pool, and validated resilience under JMeter load tests across high-traffic and pod-outage scenarios.

Spotify Music Browser | TypeScript, Angular, Node.js, Express, OAuth 2.0

Jan. 2025 – Apr. 2025

- Built a single-page web app in TypeScript and Angular over a Node.js/Express backend that proxied an external API, integrating the OAuth 2.0 authorization-code flow and in-browser playback.
- Structured the client around reusable components and a typed service layer mapping raw JSON into TypeScript models, keeping API responses type-safe across search, artist, album, and track views.

TECHNICAL SKILLS

Languages: Python, Java, TypeScript, JavaScript, SQL (MySQL, PostgreSQL), C/C++, HTML/CSS, Bash

Backend & APIs: REST APIs, Flask, FastAPI, Node.js, Express, Java Servlets, Tomcat, JWT, OAuth 2.0

Frontend: React, Next.js, Angular, Ionic, jQuery, Bootstrap, TypeScript service layers

Cloud & DevOps: AWS (EC2, S3, Lambda, API Gateway, CloudWatch), Docker, Kubernetes, Terraform, CI/CD, Nginx

Data & Tools: MySQL (replication, pooling), MongoDB, Weaviate, ETL, Git, Jira, JMeter, Postman, Agile/Scrum
